Mathematical Biosciences

an international journal

Volume 125

J. D. Evans, G. Major, and G. C. Kember (Oxford, England)
Techniques for the Application of the Analytical Solution to the Multicylinder Somatic Shunt Cable Model for Passive Neurones 1

P. R. Parthasarathy and B. Krishna Kumar (Madras, India)
Stochastic Compartmental Models with Prendville Growth Mechanisms 51

Michael J. Chappell (Coventry, England)
Structural Identifiability and Indistinguishability of Certain Two-Compartment Models Incorporating Nonlinear Efflux from the Peripheral Compartment 61

Kenneth H. Norwich and Willy Wong (Toronto, Ontario, Canada)
A Universal Model of Single-Unit Sensory Receptor Action 83

John Bishir and James Roberds (Raleigh, North Carolina)
Analysis of Failure Time in Clonally Propagated Plant Populations 109

George W. Nelson and Alan S. Perelson (Los Alamos, New Mexico)
Modeling Defective Interfering Virus Therapy for AIDS: Conditions for DIV Survival 127

Michael Y. Li and James S. Muldowney (Edmonton, Alberta, Canada)
Global Stability for the SEIR Model in Epidemiology 155

Cees Bos, Louis Hoofd, and Thom Oostendorp (Nijmegan, The Netherlands)
Mathematical Model of Erythrocytes as Point-Like Sources 165

M. I. S. Costa (Rio de Janeiro, Brasil), J. L. Boldrini, and R. C. Bassanezi (Campinas, Brasil)
Drug Kinetics and Drug Resistance in Optimal Chemotherapy 191

M. I. S. Costa (Rio de Janeiro, Brasil), J. L. Boldrini, and R. C. Bassanezi (Campinas, Brasil)
Chemotherapeutic Treatments Involving Drug Resistance and Level of Normal Cells as a Criterion of Toxicity 211

Shinji Doi and Shunsuke Sato (Osaka, Japan)
The Global Bifurcation Structure of the BVP Neuronal Model Driven by Periodic Pulse Trains 229

Announcement 251
